## Install / Upgrade / Delete

*Note: For Basic Auth/Testing, create secrets:*

```
htpasswd -c ./server/k8s/basic-auth.txt chipper && kubectl create secret generic kibana
```

### Install

```
helm --debug install --namespace client --name kibana --values './server/k8s/helm/kibana/values.yaml'
```

### Upgrade

```
helm --debug upgrade --namespace client kibana --values './server/k8s/helm/kibana/values.yaml'
```

### Delete (DANGER)

```
helm del --purge kibana
```
